Q1 to Q12 have only one correct answer. Choose the correct option to answer your question.

1. Which of the following is an application of clustering?
  - a. Biological network analysis
  - b. Market trend prediction
  - c. Topic modeling
  - d. All of the above
2. On which data type, we cannot perform cluster analysis?
  - a. Time series data
  - b. Text data
  - c. Multimedia data
  - d. None
3. Netflix's movie recommendation system uses-
  - a. Supervised learning
  - b. Unsupervised learning
  - c. Reinforcement learning and Unsupervised learning
  - d. All of the above
4. The final output of Hierarchical clustering is-
  - a. The number of cluster centroids
  - b. The tree representing how close the data points are to each other
  - c. A map defining the similar data points into individual groups
  - d. All of the above
5. Which of the step is not required for K-means clustering?
  - a. A distance metric
  - b. Initial number of clusters
  - c. Initial guess as to cluster centroids
  - d. None
6. Which is the following is wrong?
  - a. k-means clustering is a vector quantization method
  - b. k-means clustering tries to group n observations into k clusters
  - c. k-nearest neighbour is same as k-means
  - d. None
7. Which of the following metrics, do we have for finding dissimilarity between two clusters in hierarchical clustering?
  - i. Single-link
  - ii. Complete-link
  - iii. Average-linkOptions:
  - a. 1 and 2
  - b. 1 and 3
  - c. 2 and 3
  - d. 1, 2 and 3
8. Which of the following are true?
  - i. Clustering analysis is negatively affected by multicollinearity of features
  - ii. Clustering analysis is negatively affected by heteroscedasticityOptions:
  - a. 1 only
  - b. 2 only
  - c. 1 and 2
  - d. None of them

9. In the figure above, if you draw a horizontal line on y-axis for  $y=2$ . What will be the number of clusters formed?

- a. 2
- b. 4
- c. 3
- d. 5

10. For which of the following tasks might clustering be a suitable approach?

- a. Given sales data from a large number of products in a supermarket, estimate future sales for each of these products.
- b. Given a database of information about your users, automatically group them into different market segments.
- c. Predicting whether stock price of a company will increase tomorrow.
- d. Given historical weather records, predict if tomorrow's weather will be sunny or rainy.

**Q13 to Q14 are subjective answers type questions, Answers them in their own words briefly**

13. What is the importance of clustering?

Ans: Clustering is a pre-processing step to group data having similarity. This is very important in case when we don't have labelled data. Clustering is used for customer segmentation. Clustering is useful for exploring data. If there are many cases and no obvious groupings, clustering algorithms can be used to find natural groupings.

14. How can I improve my clustering performance?

Ans: There are various ways in which we can improve the performance of the clustering. Some of them are:

- If we are using K means clustering instead of random picking up the centroids K-means++ algorithm should be used for initialisation of centroid.
- Use of probability proportion technique so that K-means would not get much affected by outliers.
- Choosing the right number of K ( number of clusters) using elbow method.
